Our Programs

Education

OpenMinds addresses gaps in education systems with innovative, low-cost, replicable interventions that span the age spectrum. Working both directly and through government systems, these programs collectively reach millions of children and thousands of school dropouts each year. In "direct" work, a Pratham instructor works with children either in the school or in the community.

EVENTS

Open Minds - HAMARA GAON (Our Village - Our Community)

Open Minds gaps in education systems with innovative, low-cost and replicable interventions. Working both directly and through government systems, these programs reach millions of children and school dropouts each year. In direct work, an instructor works with children either in the school or in the community, whereas the partnership model involves teams working closely with government teams at the state, district or city level to implement programs. Its approach to improving learning outcomes continues to serve as a model, both within India and beyond. Our efforts for the last two decades have been largely focussed on finding a solution for this learning crisis.

Open Minds' Girls and Women Education

Our Second Chance program focuses on providing school drop-outs another chance at education. We focus on completion of Grade 10, in the hope that this academic certificate would prove useful for the learners. It uses innovative teaching methods, to provide accessible and affordable learning opportunities. The students go through a Foundation Course as a part of the preparation for the Secondary School exam. Then they move to the Main Course, where they study in an interactive environment that includes discussions, debates and presentations.

Open Minds' Digital Initiatives

The Hybrid learning program involves getting children in the age group 10-14 in a village to form their own groups of 5-6 each, thus enabling them to co-create a learning space within their community. Digital devices and content placed directly in the hands of children providing them with opportunities and choices to learn on their own. Groups engage in choice-based learning and are guided by the coaches and youth members in the communities. The program aims to create an open learning mechanism enabling children and youth to prepare for school, work, and life. It has been designed on the premise that children can be motivated to learn on their own. Children learn on tablets and do projects or conduct activities and then present what they have learned in front of a live audience of parents.

Open Minds' Vocational Training

The objective is to train youth from economically disadvantaged backgrounds and provide employable skills and employment opportunities. We conduct short-term courses focusing rural areas and urban slums. The model is based on industry linkages and focuses on hands-on skills training. Courses include construction, hospitality, automotive, healthcare and wellness services. Students also learn English, computers and life skills. It has a four-step approach: Mobilization, Training, Placement and Post-placement support. It also provides mentoring support to set up micro-enterprises.
